1. When was the Museum of Cosmonautics opened?
2. What can the exhibits tell us about the early stage of space exploration?
3. Where is the Museum of Cosmonautics located?
4. What facilities does the Museum of Cosmonautics offer to its visitors?
5. Where can you look for information about international space flights?

A. VDNKh is one of the central and most impressive Metro stations in Moscow. It is featured in tourist guides and there are always lots of people going in and out of the station. Right by the Metro Station exit, a monument to the Conquerors of Space will certainly attract your attention. It is not only an impressive monument — inside the base of the Space monument tower you will find the Museum of Cosmonautics — a unique museum with exhibits which are definitely worth seeing.

B. The monument to the Conquerors of Space was constructed in 1964 to glorify the first manned space flight. It is designed as a 107-metre high obelisk, and its shape resembles the fumes from the rocket. The shiny rocket is on the very top of the obelisk, heading up to the sky. The Museum of Cosmonautics appeared in the base of the monument much later. It welcomed the first visitors on April 10, 1981. The event was devoted to the 20th anniversary of Yuri Gagarin's space flight.

C. There are several exhibit halls in the museum. In one of them, there are objects and documents referring to the beginning of the era of space exploration. There you can see replicas of the first satellites and the first space station, as well as some personal belongings of the first cosmonaut of the Earth. There are also some documents referring to the space flights as well as photos and videos which recorded the preparation for the first space flight.

D. After a three-year reconstruction, which was completed in 2009, a few new sections were added to the Museum of Cosmonautics. Before the reconstruction, the museum focused only on the achievements of the National Space Programme. Now, the new sections provide information about the space programmes of the USA and China. Of course, a special area is dedicated to the International Space Station, where space researchers from different countries work together.

Venus is one of the hottest planets in the Solar system. The temperature on its surface is 482 degrees. This unfriendly place looks much the same as the Earth 4 billion years ago. Both planets were formed from the same gas cloud but Venus lost most of its water and atmosphere. This happened because the planet turns very slowly. As a result, now it has no magnetic field to protect it from the Sun's winds. The planet has turned into a lifeless desert. Most space modules that were sent to Venus, could not work on the planet more than two hours. The acidic clouds and high pressure quickly made them absolutely useless.
